

CAPPELLOTTO INTEGRAL POWER TAKE-OFF

with vertical arrangement for positioning the pump assembly on top of the chassis for easy checks and maintenance, as well as to avoid modifying or tampering with the vehicle's systems. This is fitted by intercepting the transmission shaft and is mounted to the equipment chassis. It transfers all the vehicle's engine power for PTO-driven operation of the vacuum pump and high pressure water pump with maximum performance.

The power take-off is engaged from the driver's cab. This type of CAPPELLOTTO mechanical transmission ensures:

- Much higher performance than other transmissions.
- Low fuel consumption.
- Simple and safe manoeuvring.
- Easy maintenance.
- Limited hydraulic oil reserve (only for driving the accessories).
- Longer vehicle transmission and clutch life, as these are never activated while the equipment is operating.
- No limits to transferrable power.
